

Danielle Osborn Mills

Danielle Osborn Mills has fifteen years of experience working on complex California energy and environmental challenges. As Principal of Renewable Energy Strategies and Director of the American Wind Energy Association of California, she works with global leaders in renewable energy development to advocate for the development of utility-scale wind energy as a critical component of a clean, affordable, and reliable electricity system for California.

Ms. Osborn Mills' previous experience includes consulting and advocacy for a suite of clean energy technologies and collaboration with environmental groups to combat climate change and minimize environmental conflicts associated with energy development. Danielle has a B.S. in Natural Resources from the University of Michigan and her M.P.A. from the University of Washington, where she focused on Climate Policy. She enjoys exploring the trails of the Sierra foothills with her family.
